

Photo Red Light Program

Accidents resulting from a red light violation often involve serious injury and significant property damage. To reduce red light violations and increase traffic safety in the City of Fairfax, the Police Department uses Photo Red Light Enforcement technology as a supplement to traditional traffic enforcement activities. In 2003 the Police Department issued 10,342 photo red light citations. An increase of 3,029 violations. This increase is a direct result of adding three additional cameras for a total of six. The average number of recorded violations per camera declined for the fourth consecutive year, confirming the value of the program in reducing the risk of crashes at signal-controlled intersections. More information can be obtained about Photo Red Light Enforcement by visiting the Web Site at www.fairfaxva.gov/Police
